

SUMMARY

Software Engineer with production internship experience across Indian and U.S. organizations, building AI-integrated web applications using React.js, FastAPI, MongoDB, and AWS Lambda. Delivered cloud-deployed, full-stack features with measurable backend performance improvements. Published patent holder — B.Tech Information Technology

EXPERIENCE

Software Engineer Intern — Skill Software INC
Remote (Delaware, USA)

Aug 2025 – Sep 2025

- Diagnosed and resolved high-latency bottlenecks on production endpoints by introducing Redis caching and Celery async task queues, reducing p95 latency by ~40% under concurrent load.
- Designed and integrated LLM-powered automation features using structured prompt engineering, eliminating repeated manual intervention across multiple workflows and accelerating processing pipeline throughput.
- Worked directly with product and engineering stakeholders across time zones to translate business requirements into shippable features, maintaining consistent delivery velocity across a remote, cross-functional team.

Team InfoSoft · Full Stack Developer Intern
Tirunelveli

Jun 2024 – Jul 2024

- Led the full redesign of the company's public-facing home page in React.js — delivered to production, replacing the existing site and establishing a new visual baseline for the brand's web presence.
- Built data analysis dashboards to surface operational insights for internal decision-making, translating raw business data into structured reporting used by the management team.

PROJECTS

Flint · Next.js 14, FastAPI, MongoDB, Gemini API, TypeScript · flintn.netlify.app

- Built a full-stack AI document intelligence platform that processes PDFs into multi-level summaries, semantic vector search, and spaced repetition quizzes using Google Gemini API with parallel async processing and structured JSON output.
- Engineered a RAG pipeline from scratch using Gemini embeddings and cosine similarity, with cross-document synthesis, scenario simulation, and a custom physics force graph in raw SVG without any third-party AI or graph library.

ChatNest – AI-Powered Chat Platform · React.js, FastAPI, MongoDB, MCP Server, OpenAI API, WebSockets

- Developed a real-time AI chat application powered by OpenAI API and WebSockets, enabling low-latency conversational responses at scale.
- Integrated an MCP Server for model context management and architected a scalable backend with FastAPI, Node.js, and MongoDB handling concurrent sessions.

SKILLS

- **Languages:** JavaScript, Python, C
- **Frontend:** React.js, Next.js, TypeScript, HTML, CSS, Bootstrap, Streamlit
- **Backend:** FastAPI, Node.js, Express.js, Flask
- **Databases:** MongoDB, MySQL, Redis, Firebase
- **Cloud & DevOps:** AWS Lambda, Docker, Jenkins, GitHub Actions, CI/CD, YAML
- **Tools:** Git, Postman, Figma, VS Code, Studio 3T, Netlify

EDUCATION

Bachelor of Technology – Information Technology
Francis Xavier Engineering College, Tirunelveli · CGPA: 8.07/10

Nov 2022 – Apr 2026

PATENT

ECO-WELL – Combining Sustainability and Well-being: Food & Medicine Management System
Application No: 202541041540 A · Filed: 30 April 2025 · Published: 30 May 2025 · Country: India
